EXPERIENCE

IT Engineer

Feb. 2026 – Present

AIC

San Jose, CA

- Developed an internal Python tool to parse and process part inspection results, reducing manual QC review time by ~60% for a team of 8 engineers.
- Built SQL-backed data pipelines to consolidate inspection records from multiple sources, cutting report generation time from hours to under 5 minutes.
- Automated repetitive data manipulation workflows in Python, eliminating ~3 hours of manual work per week across the team.

Software Engineer

Jul. 2025 – Jan. 2026

Atreyus LLC

Remote

- Built an agentic vector store pipeline for a production RAG system, achieving 93% chunk-level retrieval accuracy with full evaluation coverage.
- Designed async job processing with ARQ and AWS ECR, increasing file processing throughput by up to 20x and cutting end-to-end processing time significantly.
- Improved model estimation accuracy by 10% through targeted prompt engineering, reducing output drift across retrieval workflows.
- Optimized the embedding pipeline, delivering a 9% accuracy improvement and 3x faster processing speed across the retrieval stack.

Software Engineer Intern

Jun. 2024 – Aug. 2024

Flatirons AI

Remote

- Optimized Django REST APIs for a data ingestion pipeline, improving throughput by 30% by offloading processing to cloud-based async jobs.
- Integrated an LLM into a production chatbot, enabling dynamic feedback-driven learning and measurably improving contextual response accuracy.
- Refactored frontend components in React, reducing latency and contributing to a 20% increase in positive user feedback scores.

PROJECTS

Linguofy.ai | *Flask, React, Whisper, Faster-Whisper, Gemini, PostgreSQL*

Jan. 2025 – May 2025

- Real-time transcription app with Faster-Whisper (3x speedup) and a Gemini AI agent for auto-summarization, achieving 90% Q&A accuracy and 40% storage reduction.

Pneumonia Detection | *PyTorch, TensorFlow, NumPy, Pandas, Matplotlib*

Jan. 2024 – May 2024

- Trained CNN and Vision Transformer models on 5,000+ chest X-rays, improving classification accuracy from 85% to 93.8% through architecture tuning and data augmentation.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL

Frameworks: FastAPI, Django, Flask, Node.js, Express.js, React

AI / ML: LangChain, Hugging Face, PyTorch, TensorFlow, OpenAI Whisper, RAG pipelines, prompt engineering

Infrastructure: AWS, Docker, Redis, PostgreSQL, MySQL, Vector Databases, Git, Linux

EDUCATION

San Jose State University

San Jose, CA

Master of Science in Software Engineering, Specialization in Data Science

May 2025

California Polytechnic State University, San Luis Obispo

San Luis Obispo, CA

Bachelor of Science in Computer Science

Jun. 2023
